

Webinar June 24, 2020 19h00 - 20h30 GMT+2 **Business Analysis** 

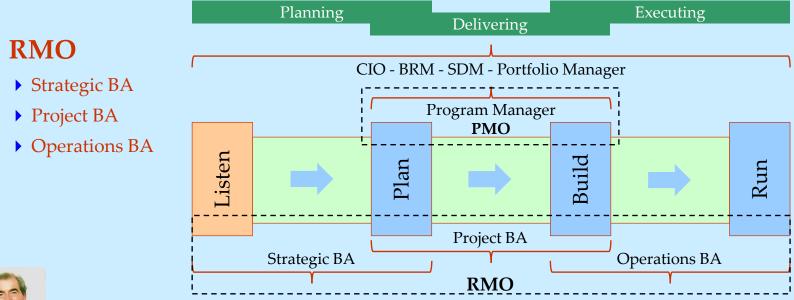

## Why You Do Need a Requirements Management Office

Making Change a Core Competence

# **Requirements Management Office**

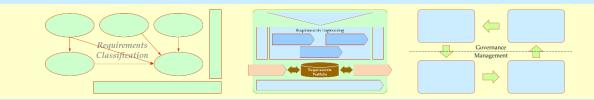

Michel RAIMONDO

Digital Business Transformation michel.raimondo.mr@gmail.com

### What is a Requirements Management Office? Why do you need one?

Requirements are a critical component when developing and implementing solutions, and managing related organisational changes. Requirements elicitation and management is typically conducted following project management frameworks, methods, and good practices. However, requirements life cycles outlast projects life cycles. On the one hand, they need to be maintained to assist ongoing business operations. On the other hand, they also need to be continuously maintained to help adapt organisations' capabilities to changing market needs, new customer usages, and technology evolutions.

Therefore, requirements need to be managed independently from projects, within the RMO: the **Requirements Management Office.** 

**Michel Raimondo** has been working as operational consultant for over 30 years, covering business transformation, change management programs, IT governance and strategic planning, portfolio/program management, business process reengineering and business architecture/analysis.

Linking strategies and operations, aligning business/IT goals and strategies, processes and operations and management systems are his specialty. As strategic business partner, he has a sound understanding of how technology can be used to advance business/IT strategies.

Furthermore, Michel has experience in a wide variety of industries like Oil & Gas, manufacturing, utilities, mining, engineering, public transportation, healthcare, insurance.

In addition to his consulting roles, he has held several leadership positions in information systems departments as CIO (15 years) and he presents at conferences and facilitates workshops as well.

Last but definitely not least, he is IIBA<sup>®</sup> - CBAP<sup>®</sup> certified (2008 - 2014), passed the ISACA - CGEIT exam (2013) and got the ITIL Foundations v3 certificate (2008, Deloitte).

### **Event directions:**

IIBA Brussels Chapter is eager to welcome you for an inspiring session on Wednesday the 24<sup>th</sup> of June, 2020.
